[doi:10.1063/1.3267146]

In Eq. (1) of Ref. 1, the factor $n$ should not enter into the formula, which is now written as:

$$k_{sp}(\omega) = k_i + m \cdot \frac{2 \pi}{l},$$

(1)

where $k_{sp}$ is the wavevector of an SP mode on either the air or the glass side, $k_i$ is the wavevector of the incident light parallel to the grating surface, $m$ is the diffraction order (1,2,3...), and $l$ is the grating period. However, the subsequent results are not affected.
